

ADHESIVE ANCHORS

A semi-permanent anchor for any smooth, flat surface. But be careful! You only get one shot. Once the sticky side makes contact, it cannot be removed without ruining the mounting tape.

We strongly recommend watching our video tutorial first. Honestly, just skip the rest of this card and scan the QR code, or go to moonfab.com/products/adhesive-anchors

USE CAUTION WHEN APPLYING

The 3M VHB (very high bond) adhesive lives up to its name. Make sure you know what you're doing before removing the backing (i.e., watch the tutorial, big guy)

MOUNT TO ROOF OF VEHICLE IF POSSIBLE

Adhesive anchors can be installed vertically, but roof placement is preferred. The metal extension tabs are *optional* (intended for high roof installations).

DO NOT USE IN HIGH WINDS

Adhesive anchors are not meant for use in conditions where winds are above 10 mph. But you watched the tutorial, so you already know that, right?
